We have designed a cooling modification for TSIO-520 and TSIO-550 powered Malibus that lowers CHTs 20 to 40 degrees, lowers oil temperatures 10 to 30 degrees, and retains the stock appearance and performance of your Malibu. This modification was designed specifically to address the cooling problems that are unique to the Malibu with the Continental engine.

Climb on hot days without having high CHT or oil temperatures.

During FAA certification testing, we passed the climb cooling test with more than a 40 degree margin to FL260.

Available at MMOPA for only $900!
